Facilitator

Lucy Chapman

Events Manager

We're Attest.

Attest was designed for **ambitious marketers that aren't experts in doing research, but do need answers - fast.**

Our survey platform connects you to 100 million consumers across 46 countries, making asking consumers questions and getting answers fast, easy, and scalable.

Welcome & Housekeeping

- 25 minute presentation, 10 minutes for Q&A
- Please ask questions throughout using the box on the right of your screen
- This session is being recorded - you'll receive the recording via email
- Look out for us launching some polls during the session
- You can use [#AttestEvents](#)
- Post-webinar survey

Who Am I?

Dr. Gökhan Çiflikli
Senior Data Scientist
Attest

Today's Agenda

01

Data Annotation

02

Active Learning

03

AI-Assisted Labelling

04

Fraud Detection

05

Q&A

Data Annotation: New Frontier

How obtaining labelled data at scale become the new bottleneck in the industry

AI-Assisted Active Learning

How we built our state-of-the-art machine learning infrastructure with a human-in-the-loop

Fraud Detection & Data Quality

How we leverage our algorithms to achieve unassailable level of audience quality

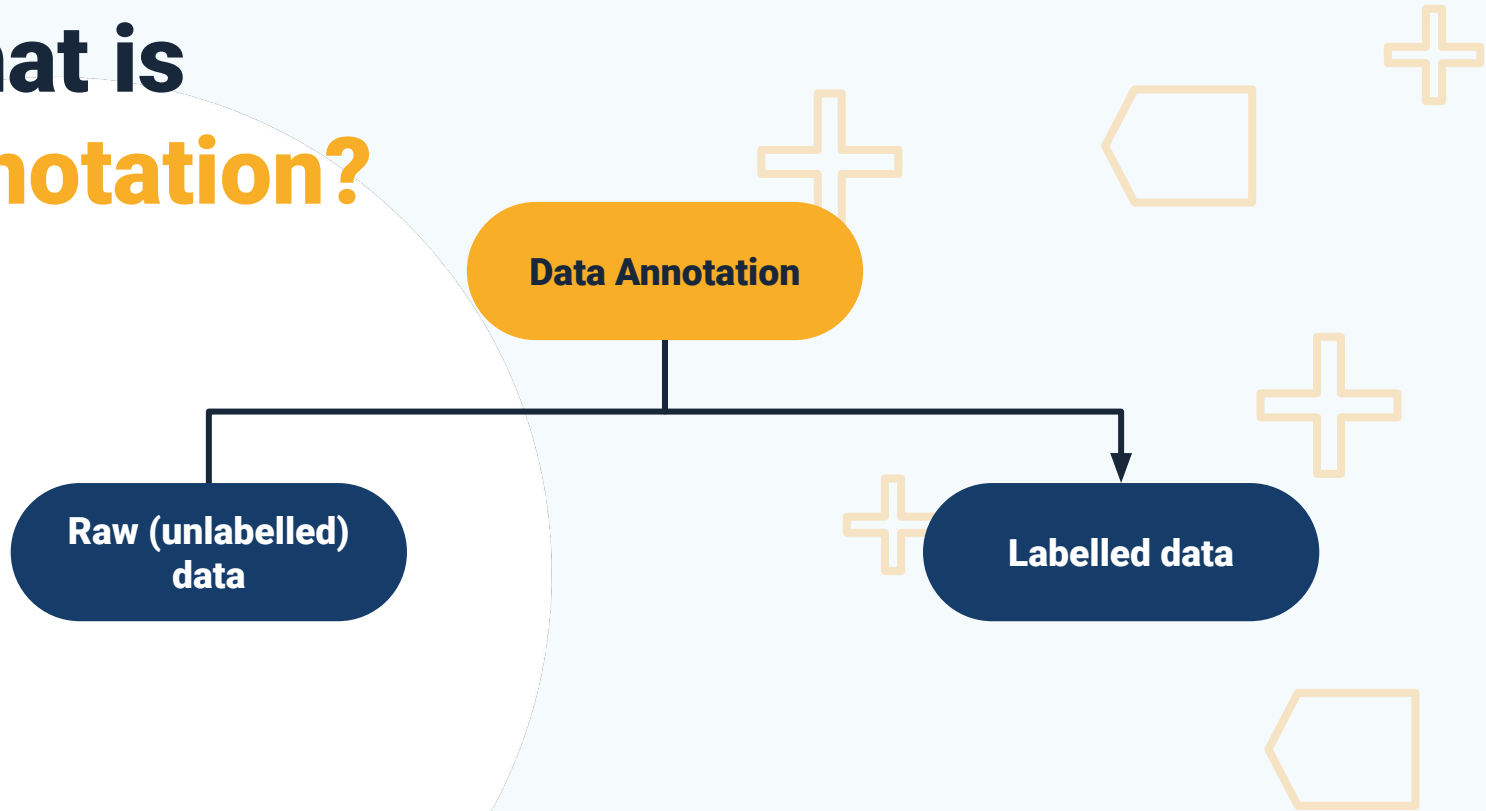

Data Annotation: The New Frontier

What is annotation?

The Bottle

neck

#AttestEvents

Time	Incoming Data Points	Human Annotation (120 labels/hr)	Labelled Data Percentage
1 day	138K	2 hrs/day, 2 people	0.4%
1 month	4.15M	4 hrs/day, 4 people	1.4%
1 quarter	12.5M	8 hrs/day, 8 people	5.8%
1 year	50M	8 hrs/day, 100 people	18%

Active Learning

Human-in-the-loop

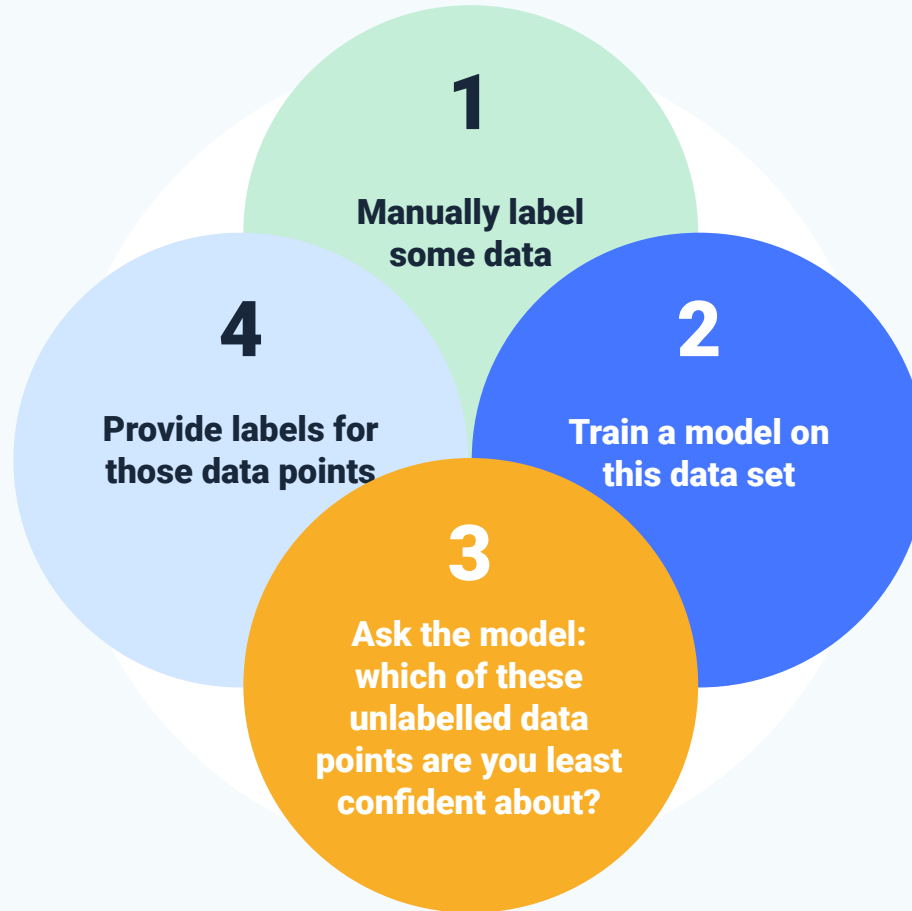

If we allow our algorithm to ask us:

**Hey, I'm not feeling very confident about
my prediction for this respondent
answer, can you help me out?**

Would it perform better?

Active Learning Cycle.

“

**“All good.
What else can we do to
expedite the labelling
process?”**

AI-Assisted Labelling

If it looks like a duck

1

Predict labels for unlabelled data points.

2

Label the data points that the model is highly confident about.

3

Continue asking for human annotation for least confident data points.

Fraud Detection

We combine **active learning** with AI-assisted machine learning predictions to detect fraud in real time.

Fraud Detection Algorithm Powering Attest

Flatliners,
overclaimers

**Demo-
graphics**

Impossible,
inconsistent

3

Top 3 Takeaways

- 01.** Humans provide labels for the most challenging cases to teach the model
- 02.** Models suggest labels for similar data points, instantly labelling 1000s of data points
- 03.** Combining both approaches, data annotation is handled at scale, internally
